

Kilkenny Beer Cooling Systems
Information / Proposal

For Richard Cook
Balkanik Drinks Dispense

By John Smee
Kilkenny Cooling Systems

Date: 3rd March 2020

Goal

Kilkenny Cooling Systems is very well established and respected here in Ireland, and we regularly get contacted on a once-off basis by overseas clients who wish to tap into our cooling expertise. We have completed a number of interesting and highly bespoke drinks dispense projects abroad.

For a long time we have felt that there are many overseas draught beer markets which would benefit from our beer cooling product. We are very interested in investigating how this might be possible.

We welcome discussions with breweries, agents, importers and distributors of drinks dispense equipment.

There is lots of information about our and our products on our website kilkennycooling.com and on youtube.

Kilkenny Beer Coolers – An Overview

Kilkenny Beer Cooling Systems has the largest market share by far in what is often considered to be the world's most exacting country for draught beer, in terms of customer expectations for quality and consistency.

Fleet of Kilkenny high volume beer cooling systems & MDUs in storage between events at Sydney Olympic Park, Australia.

The vast majority of Irish draught beer outlets are equipped with Kilkenny Beer Coolers, and 100% of the 'prestige' venues have been fitted out with them including:

- 3Arena
- Aviva Stadium
- Croke Park Stadium (3rd largest capacity stadium in Europe)
- All major racecourses, event centres and large venues
- A fleet of Kilkenny Mobile coolers services all major concerts and temporary events in the country each summer

Kilkenny Cooling Systems has also built equipment for a number of notable overseas clients and has custom-built cooling systems in Copenhagen's Royal Arena, The Wembley Stadium Fan Zone, the largest event centre in Lagos and in Sydney's Olympic Park. Please see the case studies page on our website for more information.

Award Winning Technology

Kilkenny Beer Coolers have been acknowledged by The Sustainable Energy Authority of Ireland, The Institute of Refrigeration Ireland and Engineers Ireland for developments in energy efficiency.

Research and Development

Kilkenny Cooling Systems has an excellent working relationship with Ireland's major breweries. We can provide references in Diageo Ireland and Heineken Ireland, having done custom design work for both.

Product Range

The smallest machine in our range is a 9-track single pump machine – known as the 'Junior'.

The next size up is a 12 track 2 pump machine and the sizes increase in 4s right up to our largest product - a 48 track 2 pump machine.

All of these machines are available in fixed and energy saving variable speed pump versions. We typically do not provide refrigeration systems with the coolers, as these tend to be sourced and installed by local refrigeration contractors.

We do offer an integral machine for extremely demanding applications such as high volume festivals etc. This machine has twin refrigeration circuits and pumps for added reliability and is capable of cooling thousands of pints per hour at high speed.
